Unlock the full potential of AI at work

Merge for Workforce brings company context, tools, and approved models to the AI employees use, under policies admins set once and enforce everywhere.

Provision

Grant employees AI access that fits their roles

Connect identity providers like Okta or Entra via SCIM so AI access follows your org chart. New hires see what they are approved to use.

Permission

Provide teams with the agent tools and models they need

Distribute access to AI models, agent tools, and skills to employees, with granular permissions for what each team can access.

Act

Secure AI workflows without slowing adoption

Employees use AI to take approved actions, while tool calls are scanned for sensitive data before reaching external systems.

Ship AI and integrations your customers trust, faster

Merge is the layer between your product and every external connection: sync customer data, give agents secure tool access, and route to any model, all through one platform.

Data systems

Sync customer data

Connect to HRIS, ATS, CRM, accounting, ticketing, file storage, knowledge base, and chat systems, all through one API.

Agent tools

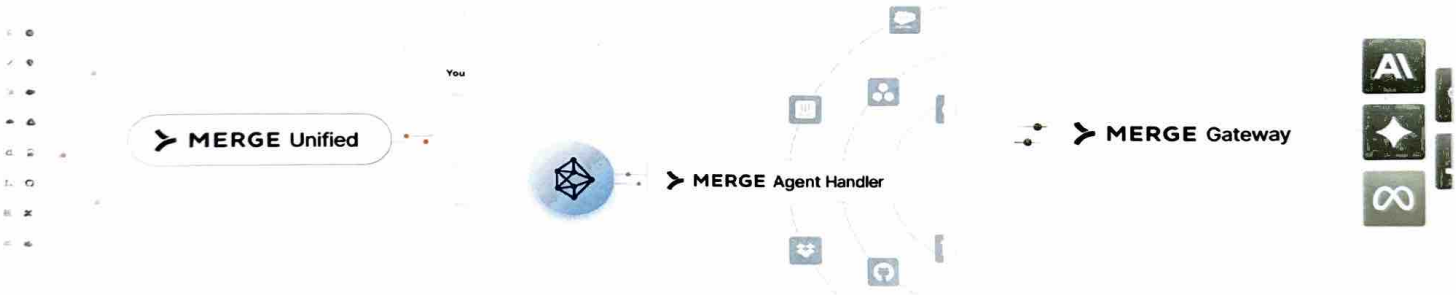

Give agents secure tool access

Scope agent access across 5,000+ tools, with every call authenticated, logged, and auditable.

AI models

Route to any LLM

Access every major model with intelligent or customer routing and cost and performance control built in.

telnyx

"With the help of Merge, we're able to deliver the most connected voice AI agents in the market. As a result, demand from enterprise organizations across industries has surged."
