C1.ai SOLUTION BRIEF

C1 Identity Platform

One platform to govern identity, access, and agent work.

Identity is growing faster than governance.

Every new employee, service account, and AI agent adds access that someone has to review, own, and eventually remove. AI is only as valuable as the access and context it can act on. Most organizations can't deliver the right access to every identity, across every system, at the speed the business needs. Security, IT, and identity teams add a new integration for every new agent or workflow. Context fragments, access reviews take weeks, and standing privileges pile up. The risk is real: 80% of organizations experienced at least one identity-related breach in the past year.[1]

AI adoption compounds the problem. Agents have no identity. Credentials leak into agent context. Nothing enforces policy at runtime. Shadow AI is already running. And the human workforce problem never went away. Without a governed path that moves at enterprise speed, teams work around governance entirely.

What C1.ai delivers

Complete visibility

Every person, service account, workload, and agent, linked to its accounts, entitlements, and accountable owners. Risky access gets found and fixed before it becomes a security issue.

One connected inventory

Findings, governance, agent access, credentials, and work run on the same identity and access data. People and agents are governed under one policy and one audit trail.

Built for engineers

Automate through the REST API and SDKs, the C1.ai CLI, Terraform, and Functions. Access policy lives in code, so every change is reviewed, versioned, and repeatable.

One platform. The full identity stack.

The C1 Identity Platform connects data from your systems into one shared identity and access inventory. Every finding, review, grant, and agent action draws on the same data, so security sees the full picture, IT stops stitching tools together, and governance keeps pace as the business adds people, systems, and agents.

For governance, that means automated joiner-mover-leaver workflows, just-in-time access in place of standing privilege, and AI-assisted access reviews, so teams can modernize identity without rebuilding it. For AI, agents get their own scoped identities instead of borrowed human ones, inference is routed by risk and cost, and agent keys stay in a vault, out of code and context. An open-source connector ecosystem extends coverage to any system.

GOVERN	Identity	Use AI to manage lifecycle, access requests, reviews, and compliance for people, non-human identities, and agents.
RUN	Secure agents	Give agents policy-controlled access to models, tools, and credentials at runtime.
WORK	Put AI to work	C1 Agents complete multi-step jobs across connected systems, with human approval for sensitive changes.
PLATFORM		Connect identity data, policy, findings, and actions across the C1.ai product suite.

C1.ai is the identity platform for the AI era.

See every identity in one place.

Employees, contractors, service accounts, and AI agents in one identity graph. Eliminate blind spots, surface risks, and right-size access.

Find and eliminate access risk.

Surface orphaned accounts, high-risk access, and entitlement sprawl across your environment, and remove them before they become security issues.

Every system, already covered.

400+ C1 Connectors, built on Baton, our open-source connector framework, cover nearly every system in the modern stack. Run them hosted by C1.ai or inside your own infrastructure, and reach on-prem systems with C1 Bridge.

Every agent, governed from day one.

AI agents act on systems through MCP. 3,000+ C1 MCP Servers route every agent tool call through the same policy engine and audit trail as every human request.

Put AI to work. Everywhere.

Authorization moved from the network, to the endpoint, and now to identity. The companies leading in AI transformation aren't the ones with the most agents. They're the ones who can govern every agent, tool, and human on the systems that matter, the moment the business needs them. That takes identity infrastructure that's cross-cutting, real-time, and policy-driven by default. C1.ai puts AI to work, with the identity platform built for the AI era.

About C1.ai

C1.ai

C1.ai is the identity platform for the AI era. Our platform connects humans and agents to enterprise systems with scoped access, enforced policies, human approval, and a record of every action. With C1.ai, the fastest path to AI adoption at scale is the governed path—giving organizations visibility and control without sacrificing security or slowing innovation. Companies such as Ramp, Zscaler, Qualtrics, and DoorDash trust C1.ai to govern identity, secure agents, and empower their teams to put AI to work.

Put AI to work.
